TRIDONIC

Compact fixed output

Driver LC 25W 450-600mA flexC SR SNC4

essence series

Product description

- Independent constant current LED driver
- For luminaires of protection class II
- For luminaires with M and MM as per EN 60598, VDE 0710 and VDE 0711
- Temperature protection as per EN 61347-2-13 C5e
- Selectable fixed output current 450, 500, 550 and 600 mA (pre-selected current 450 mA)
- Max. output power 25.2 W
- Up to 87.5 % efficiency
- Nominal lifetime up to 100,000 h
- 5 years guarantee (conditions at www.tridonic.com)

Housing properties

- Casing: polycarbonate, white
- Type of protection IP20

Interfaces

• Terminal blocks: 45° push terminals

Functions

- Overload protection
- Short-circuit protection
- No-load protection
- Overtemperature protection
- Burst protection voltage 1 kV
- Surge protection voltage 1 kV (L to N)
- Surge protection voltage 2 kV (L/N to earth)

Typical applications

- For spot light and downlight in retail and hospitality application
- For panel light and area light in office and education application

Driver LC 25W 450-600mA flexC SR SNC4

essence series

Technical data

recnnical data	
Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
Max. input current (at 230 V, 50 Hz, full load)	0.125 A
Mains frequency	50 / 60 Hz
Overvoltage protection	320 V AC, 2 h
Typ. power consumption (at 230 V, 50 Hz, full load) [®]	28.5 W
Min. output power	10.8 W
Max. output power	25.2 W
Typ. efficiency (at 230 V / 50 Hz / full load) ^①	87.5 %
λ over full operating range (max.) $^{\scriptsize (1)}$	0.97
λ over full operating range (min.)	0.93C
Output current tolerance®	± 7.5 %
Max. output current peak [®]	≤ output current + 12 %
Max. output voltage	55 V
THD (at 230 V, 50 Hz, full load)	< 15 %
Output LF current ripple (< 120 Hz)	± 5 %
Output P _{ST} ^{LM} (at full load)	≤ 1
Output SVM (at full load)	≤ 0.4
Starting time (at 230 V, 50 Hz, full load)	< 0.5 s
Turn off time (at 230 V, 50 Hz, full load)	< 0.5 s
Hold on time at power failure (output)	0 s
Ambient temperature ta (at lifetime 50,000 h)	40 °C
Storage temperature ts	-40 +80 °C
Mains burst capability	1 kV
Mains surge capability (between L – N)	1 kV
Mains surge capability (between L/N – PE)	2 kV
Surge voltage at output side (against PE)	3 kV
Lifetime	up to 100,000 h
Guarantee (conditions at www.tridonic.com)	5 years
Dimensions L x W x H	147 x 43 x 30 mm

Ordering data

Test result at 600 mA.

² Output current is mean value.

[®] Test result at 25 °C.

1. Standards

EN 55015

EN 60598-1

EN 61000-3-2

EN 61000-3-3

EN 61347-1

EN 61347-2-13

EN 61547

EN 62384

1.1 Glow wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

2. Thermal details and lifetime

2.1 Expected lifetime

Expected lifetime

Туре	Current	ta	25 °C	30 °C	40°C
	450 mA	tc	40°C	45°C	55 <i>°</i> C
	430 IIIA	Lifetime	100,000 h	100,000 h	100,000 h
	500 mA	tc	45°C	50 °C	60°C
LC 25/450-600/42 flexC SR SNC4	300 IIIA	Lifetime	100,000 h	100,000 h	>85,000 h
	550 mA	tc	45°C	50°C	60°C
	330 IIIA	Lifetime	100,000 h	100,000 h	>85,000 h
	600 mA	tc	45°C	50°C	60°C
	000111A	Lifetime	100,000 h	100,000 h	>85,000 h

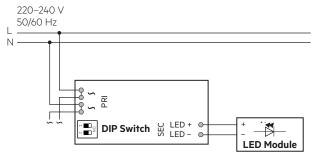

The LED driver is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical

components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / wiring

3.1 Circuit diagram

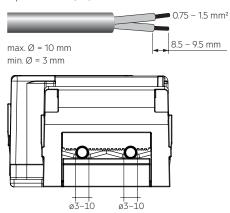

Device with loop through wiring function.

3.2 Wiring type and cross section

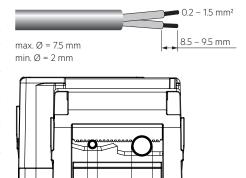

For wiring use stranded wire with ferrules or solid wire from 0.75–1.5 mm 2 (mains wires) and 0.2–1.5 mm 2 (secondary wires, LED module). Strip 8.5–9.5 mm of insulation from the cables to ensure perfect operation of the push-wire terminals.

Use one wire for each terminal connector only.

Input terminal (D2):

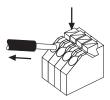

Output terminal (D1):

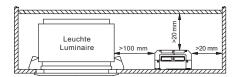

3.3 Loose wiring

Press down the "push button" and remove the cable from front.

3.4 Fixing conditions

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.

The LED module and all contact points within the wiring must be sufficiently insulated against 3 kV surge voltage.

3.5 Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Mains leads should be kept apart from LED driver and other leads (ideally 5 – 10 cm distance)
- Max. length of output wires is 2 m.
- To comply with the EMC regulations run the secondary wires (LED module) in parallel.
- · Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.)
- The current selection has to be installed in the accordance to the requirement of low voltage installation.
- Through wiring of mains is for connecting additional LED driver only.
 Max. permanent current of 2 A may not be exceeded.

3.6 Replace LED module

- 1. Mains off
- 2. Remove LED module
- 3. Wait for 20 seconds
- 4. Connect LED module again

Hot plug-in or output switching of LEDs is not permitted and may cause a very high current to the LEDs.

3.7 Current setting

Set the current by DIP switch after mains off. Use of DIP switch only after mains off.

450 mA: Switch 1 = Off, Switch 2 = Off

500 mA: Switch 1 = On, Switch 2 = Off

550 mA: Switch 1 = Off, Switch 2 = On

600 mA: Switch 1 = On, Switch 2 = On

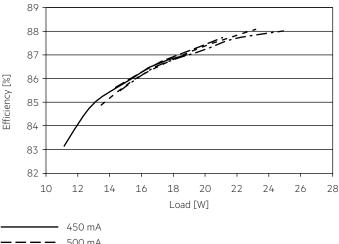

3.8 Mounting of device

Max. torque for fixing: 0.5 Nm/M4

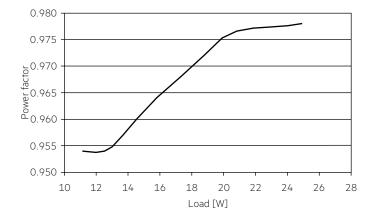

4. Electrical values

Test at 230 V 50 Hz.

4.1 Efficiency vs load

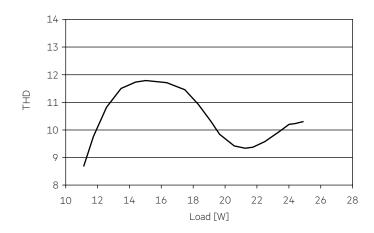

4.2 Power factor vs load

4.3 THD vs load

THD without harmonic < 5 mA (0.6 %) of the input current:

4.6 Maximum loading of automatic circuit breakers in relation to inrush current

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush	current
Installation Ø	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	Imax	Time
LC 25/450-600/42 flexC SR SNC4	33	43	53	65	20	26	32	39	18 A	210 µs

These are max. values calculated out of inrush current! Please consider not to exceed the maximum rated continuous current of the circuit breaker. Calculation uses typical values from ABB series S200 as a reference.

Actual values may differ due to used circuit breaker types and installation environment.

4.7 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

	THD	3.	5.	7.	9.	11.
LC 25/450-600/42 flexC SR SNC4	< 15	< 15	< 5	< 5	< 3	< 3

5. Functions

5.1 Short-circuit behaviour

In case of a short circuit on the output side (LED) the LED driver switches off. After elimination of the short-circuit fault the LED driver will recover automatically.

5.2 No-load operation

The LED driver works in burst working mode to provide a constant output voltage regulation which allows the application to be able to work safely when LED string opens due to a failure.

5.3 Overload protection

If the maximum load is exceeded by a defined internal limit, the LED driver will protect itself and LED may flicker. After elimination of the overload, the nominal operation is restored automatically.

5.4 Over temperature protection

The LED driver is protected against temporary thermal overheating. If the temperature limit is exceeded, the output current will reduce or LED may flicker. It will recover automatically.

6. Miscellaneous

6.1 Disposal of equipment

Return old devices in accordance with the WEEE directive to suitable recycling facilities.

6.2 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V $_{\rm DC}$ for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least $2\,{\rm M}\Omega$.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V $_{AC}$ (or 1.414 x 1500 V $_{DC}$). To avoid damage to the electronic devices this test must not be conducted.

6.3 Conditions of use and storage

Humidity: 5% up to max. 85%,

not condensed

(max. 56 days/year at 85 %)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

6.4 Maximum number of switching cycles

All LED driver are tested with 50,000 switching cycles.

6.5 Additional information

Additional technical information at $\underline{www.tridonic.com} \rightarrow \text{Technical Data}$

Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
