

#### EM powerLED BASIC FX SR 50 W

Combined emergency lighting LED Driver

#### Product description

- Independent fixed output LED Driver for mains operation with integrated Simple CORRIDOR FUNCTION (CF)
- Emergency lighting LED Driver with manual test function
- For self-contained emergency lighting
- For LED modules with a forward voltage of 15 – 50 V
- SELV for output voltage < 60 V DC
- Compact plastic casing (209 x 82 x 34 mm) with strain relief
- 5 years guarantee (conditions at [www.tridonic.com](http://www.tridonic.com))

#### Properties

- 4.9 – 50 W output power
- Constant current LED operation
- 300 – 1,400 mA output current in mains operation selectable with I-SELECT PLUG in steps of 50 mA
- Simple CORRIDOR FUNCTION (CF) with 10 % light level
- Integrated emergency lighting unit
- 1 or 3 h rated duration selectable with plug (duration link)
- Automatic shutdown of output if LED load is out of range
- Green charge status display LED
- Electronic charge system
- Polarity reversal protection for battery
- Deep discharge protection
- Short-circuit-proof battery connection

#### Batteries

- High-temperature cells
- NiCd or NiMH batteries
- D, Cs, LA or LAL cells
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to table „Battery selection“

#### EM powerLED BASIC FX SR 50 W

Combined emergency lighting LED Driver

#### Technical data

Rated supply voltage	220 – 240 V
Mains frequency	50 / 60 Hz
Typ. $\lambda$ (at 230 V, 50 Hz, normal operation)	0.95
Typ. $\lambda$ (at 230 V, 50 Hz, CF operation)	0.45
Overvoltage protection	320 V (for 1 h)
Battery charging time	24 h
Max. open circuit voltage	60 V
Time to light	< 0.5 s from detection of emergency event
Typ. power consumption in charging	3.5 W
Output LF current ripple (< 120 Hz)	< 2 %
Output current tolerance	7 %
THD normal operation	< 20 %
THD CF operation	< 30 %
Ambient temperature $t_a$ > 40 W output power	40 °C
Ambient temperature $t_a$ ≤ 40 W output power	50 °C
Max. casing temperature $t_c$	80 °C
Dimensions LxBxH	209 x 82 x 34 mm
Mains voltage changeover threshold	according to EN 60598-2-22
Type of protection	IP20
Charge current 1h	100 mA
Charge current 3h	200 mA
Discharge current 1h	960 mA
Discharge current 3h	960 mA
Lifetime	up to 50,000 h
Guarantee (conditions at <a href="http://www.tridonic.com">www.tridonic.com</a> )	5 years

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link and I-SELECT PLUG must be set before battery and mains connection.

### smartSWITCH HF 5DP f

Automatic switching based on motion and light level

#### Product description

- Motion detector for luminaire installation
- Motion detection through glass and thin materials (except metal)
- For automatic on/off switching of electronic ballasts
- Bright-out function: luminaire is not switched on if there is adequate brightness
- Delay time, detection range and light value for the bright-out function can be set via 9 dip switches
- Max. installation height 5 m
- Two housing options allowing flexible installation
- Variable detection area (100 – 10 %)
- Zero cross switching supported
- 5 years guarantee

**NiCd Battery pack 1.8 – 4.5 Ah**

Batteries

**Product description**

- High-temperature NiCd battery pack for use with emergency lighting units

**Properties**

- Constant high-temperature operation – depending on the emergency lighting unit used (refer to respective emergency control gear datasheet)
- Good charging properties at high temperature
- High energy maintenance of the charged battery
- 4 year lifetime in operation at max. temperature
- Certified quality manufacturer
- Casing material made of polycarbonate
- 0.2 m double-insulated cable with plug connection
- 0.8 m double-insulated cable with plug and pre-stripped ends for connection with the emergency unit
- 1.0 mm<sup>2</sup> solid wire, pre-stripped
- Suitable for emergency lighting equipment as per IEC 60598-2-22

## ACD EM LED INDICATOR HOLDER

## Product description

- Holder for indicator LED in emergency operation
- Glow-wire test with a temperature of 850 °C passed

## Ordering data

Type	Article number	Colour	Packaging carton	Weight per pc.
ACD EM LED INDICATOR HOLDER	28002189	White	120 pc(s).	0.013 kg

## 1. Standards

- EN 55015
- EN 61000-3-2
- EN 61000-3-3
- EN 61347-2-13
- EN 61547
- EN 62384
- EN 61347-2-7
- according to EN 50172
- according to EN 60598-2-22

### 1.1 Glow-wire test

according to EN 60598-1 with increased temperature of 850 °C passed.

### 1.2 Temperature range

According to the standard IEC 60598-1 a LED Driver for remote installation has a max. case temperature of 90 °C. The ambient temperature range  $t_a$  for the EM powerLED BASIC FX SR 50W is defined to meet this requirement.

### 1.2 Insulation and electric strength testing of luminaires

Electronic LED Driver can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 V<sub>AC</sub> (or 1,414 x 1,500 V<sub>DC</sub>). To avoid damage to the electronic devices this test **must not be conducted**.

## 2. Thermal data

### 2.1 Expected lifetime

Average lifetime 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

#### Expected lifetime

Type	Output power	$t_a$	40 °C	50 °C
EM powerLED BASIC FX 103 / 104 SR 50W 50V	10 W	$t_c$	56 °C	66 °C
		lifetime	> 100,000 h	> 100,000 h
	20 W	$t_c$	59 °C	69 °C
		lifetime	> 100,000 h	> 100,000
	30 W	$t_c$	63 °C	73 °C
		lifetime	> 100,000 h	> 100,000 h
	40 W	$t_c$	69 °C	79 °C
		lifetime	> 100,000 h	90,000 h
	50 W	$t_c$	76 °C	x
		lifetime	95,000 h	x

x = not permitted

The relation of  $t_c$  to  $t_a$  temperature depends also on the luminaire design. If the measured  $t_c$  temperature is approx. 5 K below  $t_c$  max.,  $t_a$  temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

### 2.2 Storage conditions

Humidity: 5 % up to max. 85 %,  
not condensed  
(max. 56 days/year at 85 %)

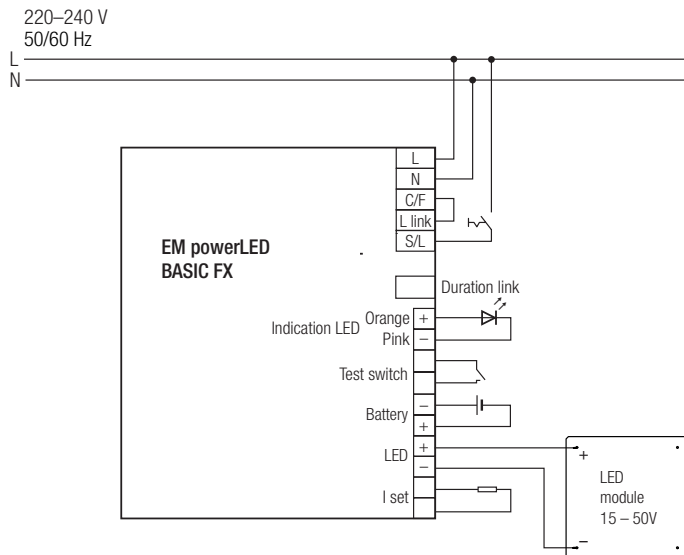

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range ( $t_a$ ) before they are operated.

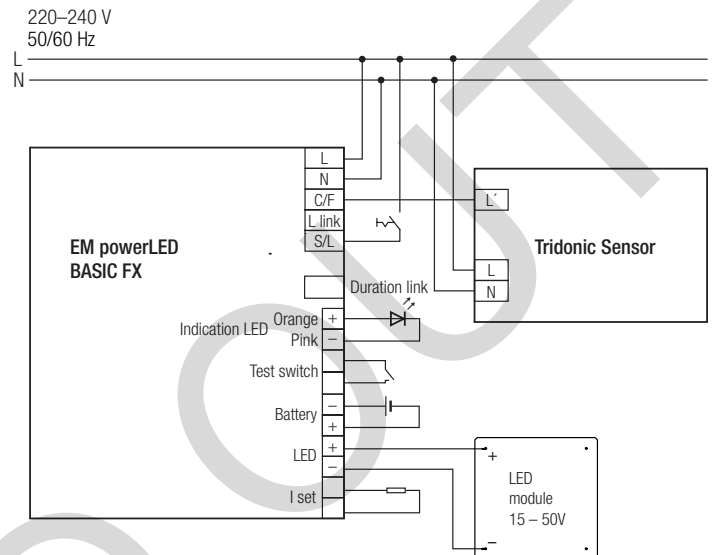

### 3. Installation / Wiring

#### 3.1 Wiring diagrams

Wiring diagram EM powerLED BASIC FX without sensor

Wiring diagram EM powerLED BASIC FX with sensor

When using the EM powerLED without a sensor, connect the terminals C / F and L link with a wire.

PIR output  $\cong$  230 V

The connected LED module will be used for mains and emergency operation.

#### Switching behaviour

S/L	C/F	LED
off	off	off
off	on	off
on	off	10 %
on	on	100 %

The mains power must be removed before changing the LED load.

Secondary switching of LEDs is not allowed and may cause damage to the LEDs. The hot plug-in of LEDs during normal operation may result in high current peaks.

#### Note

The EM powerLED BASIC FX 50W uses pulse width modulation (PWM) for the LED operation in CORRIDOR mode. This can have an adverse effect on video recording equipment e.g. cctv.

Caution should be observed when using the CORRIDOR FUNCTION in cctv monitored areas.

### 3.2 Wiring type and cross-section

#### Wiring

Mains (N, L, C/F, L link, S/L)

LED (LED +, LED -)

Batteries (Bat +, Bat -)

I set

#### Wiring

Test switch

Indication LED

Use one wire for each terminal connector only.  
Use each strain relief channel for one cable only.

max. = 10 mm  
min. = 6,3 mm

#### Max. lead insulation diameter

Battery	2.1 mm
Test switch	2.1 mm
Indicator LED	2.1 mm

#### Maximum lead length

LED	3 m
status indication LED	1 m
batteries	1 m

### 3.3 Release of the wiring

Press down the "push button" and remove the cable from front.

#### Installation instruction

Max. torque for the mounting screws: 0.5 Nm / M4.

### 3.4 Fixing conditions

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature ( $t_a$ ) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.

### 3.5 Wiring guidelines

- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- LED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- The secondary wires (LED module) should be routed in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m. The test switch and Indicator LED wiring should be separated from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m.
- To avoid the damage of the control gear, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire the switched and unswitched 50 Hz supply wiring must be routed as short as possible and be kept as far away as possible from the LED leads. Through wiring may affect the emc performance of the luminaire.

The length of LED leads must not be exceeded.

The output current depends on the forward voltage and the tolerance of the LED modules.

## 4. Mechanical data

### 4.1 Housing properties

- Polycarbonat white/green
- Type of protection IP 20

### 4.2 Mechanical data accessories

LED status indicator

- Green
- Mounting hole 6.5 mm diameter, 1 – 1.6 mm thickness
- Lead length 0.3 m / 1.0 m
- Insulation rating: 90 °C

Test switch

- Mounting hole 7.0 mm diameter
- Lead length 0.55 m

Battery leads

- Quantity: 1 red and 1 black
- Length: 1.3 m
- Wire type: 0.5 mm² solid conductor
- Insulation rating: 90 °C

Battery end termination

Push on 4.8 mm receptacle to suit battery spade fitted with insulating cover

Module end termination

8.0 mm stripped insulation

Two-piece batteries are supplied with a 200 mm lead with 4.8 mm receptacle at each end and insulating covers to connect the separate sticks together.

## 5. Electrical data

### 5.1 Maximum loading of automatic circuit breakers

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current

• Represents basic insulation

•• Represents double or reinforced insulation

### 5.4 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM powerLED module based on the total forward voltage of the LED modules connected and the associated battery.

EM powerLED BASIC FX 103 SR 50W 50V – 3 cells

Article number: 89800430

3.6 V battery voltage

750 – 960 mA battery discharge current (tolerance)

EM powerLED BASIC FX 104 SR 50W 50V – 4 cells

Article number: 89800412

4.8 V battery voltage

750 – 960 mA battery discharge current (tolerance)

— LED current at nominal battery voltage and min. battery discharge current  
— LED current at nominal battery voltage and max. battery discharge current

LED peak current at start in emergency mode – 3 cells

Voltage	Inrush current	Duration
46.0 V	209 mA	7.35 ms
43.5 V	218 mA	7.85 ms
41.0 V	229 mA	8.10 ms
38.5 V	241 mA	8.25 ms
36.0 V	255 mA	8.35 ms
33.5 V	270 mA	8.55 ms
31.0 V	288 mA	8.85 ms
28.5 V	307 mA	9.10 ms
26.0 V	330 mA	9.40 ms
23.0 V	354 mA	9.80 ms
20.5 V	383 mA	10.45 ms
18.0 V	417 mA	11.40 ms
15.5 V	455 mA	11.95 ms
13.0 V	500 mA	15.10 ms

LED peak current at start in emergency mode – 4 cells

Voltage	Inrush current	Duration
46.5 V	252 mA	8.65 ms
44.0 V	259 mA	9.30 ms
41.5 V	268 mA	8.10 ms
39.0 V	288 mA	8.45 ms
36.5 V	300 mA	9.45 ms
34.0 V	323 mA	9.60 ms
31.5 V	340 mA	9.95 ms
29.0 V	364 mA	10.85 ms
26.0 V	388 mA	11.60 ms
23.5 V	414 mA	12.40 ms
21.0 V	446 mA	13.35 ms
18.5 V	479 mA	15.20 ms
16.0 V	520 mA	16.90 ms
13.5 V	564 mA	18.95 ms

Note: LED peak current is measured at the max. battery discharge current.

### 5.5 Output current setting

Output current can be set by connecting a resistor between the 2 "I set" terminals. Relationship between output current and resistor value can be found at the table "Specific technical data". Resistor values specified from standardised resistor value ranges.

Resistor value tolerance has to be  $\leq 1\%$ .

Resistor power has to be  $\geq 0.1$  W.

Resistor detection at each start.

Change of the resistor value during the operation will be not considered.

Resistors for the main output current values can be ordered from Tridonic (see accessories).

## 6. Functions

### 6.1 Short-circuit behaviour

In case of a short circuit the unit switches to shut down mode. After elimination of the short circuit a mains reset (SL off/on) is necessary.

### 6.2 No-load operation or load loss during operation

LED Driver will detect a load loss during operation. In this case and no-load operation the max. output voltage can apply at the LED output for max. 5 s before LED Driver shuts down. Mains reset is required to restart the LED Driver.

### 6.3 Overload protection

LED Driver will switch off at overload operation. Mains reset is required to restart the LED Driver.

### 6.4 Underload operation

LED Driver will switch off at underload operation. Mains reset is required to restart the LED Driver.

### 6.5 Forward voltage out of range

If the forward voltage is out of range the unit switches to shut down mode. After elimination of the short circuit a mains reset (SL off/on) is necessary.

### 6.6 Duration link selection

Duration	Usage duration link
3 h	 With link
1 h	 Without link

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link and I-SELECT PLUG must be set before battery and mains connection.

## 7. Battery data

**7.2 Accu-NiCd****4.2 / 4.5 Ah**

Battery voltage/cell	1.2 V
Cell type	D
Case temperature range	+5 °C to +55 °C
to ensure 4 years design life	70 °C
Max. short term temperature (reduced lifetime)	12 cycles per year plus
Max. number discharge cycles	4 cycles during
	comissioning
	6 months

Max. storage time

**7.3 Accu-NiMh****2.2 Ah**

Battery voltage/cell	1.2 V
Cell type	Cs
Case temperature range	+5 °C to +50 °C
to ensure 4 years design life	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	30 cycles during
	comissioning
	12 months

Max. storage time

**4.0 Ah**

Battery voltage/cell	1.2 V
Cell type	LA
Case temperature range	+5 °C to +45 °C
to ensure 4 years design life	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	30 cycles during
	comissioning
	12 months

Max. storage time

**7.4 Accupack-NiCd****1.8 Ah**

Battery voltage/cell	1.2 V
Cell type	Cs
Ambient temperature range	+5 °C to +40 °C
to ensure 4 years design life	+45 °C
tc point	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	4 cycles during
	comissioning
	6 months

Max. storage time

**4.5 Ah**

Battery voltage/cell	1.2 V
Cell type	D
Ambient temperature range	+5 °C to +40 °C
to ensure 4 years design life	+45 °C
tc point	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	4 cycles during
	comissioning
	6 months

Max. storage time

**7.5 Accupack-NiMH****2.2 Ah**

Battery voltage/cell	1.2 V
Cell type	Cs
Ambient temperature range	+5 °C to +35 °C
to ensure 4 years design life	+40 °C
tc point	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	4 cycles during
	comissioning
	12 months

Max. storage time

**4.0 Ah**

Battery voltage/cell	1.2 V
Cell type	LAL
Ambient temperature range	+5 °C to +35 °C
to ensure 4 years design life	+40 °C
tc point	70 °C
Max. short term temperature (reduced lifetime)	4 cycles per year plus
Max. number discharge cycles	4 cycles during
	comissioning
	12 months

Max. storage time

**7.6 Batteries**

Connection method: 4.8 x 0.5 mm spade tag welded to end of cell

For stick packs this connection is accessible after the battery caps have been fitted.

To inhibit inverter operation disconnect the batteries by removing the connector from the battery spade tag.

For further information refer to corresponding battery datasheet.

**7.7 Storage, installation and commissioning**

Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.

**8. Miscellaneous****8.1 Maximum number of switching cycles**All LED Drivers are tested with 50,000 switching cycles.  
The actually achieved number of switching cycles is significantly higher.**8.2 Additional information**Additional technical information at [www.tridonic.com](http://www.tridonic.com) → Technical DataLifetime declarations are informative and represent no warranty claim.  
No warranty if device was opened.
