

Module CLE G3 ADV

Modules CLE advanced

Product description

- Ideal for ceiling-mounted and wallmounted luminaires
- Based on circular and TC-DD fluorescent lamps
- SO version is compatible with SWITCH Sensor HF 5BP
- Integrated separate emergency LEDs with CLE G3 190/220/315 controlled by EM powerLED
- Push terminals for quick and simple wiring
- Long life-time: 50,000 hours
- 5-year guarantee

Optical properties

- Colour temperatures 3,000 and 4,000 K
- Typ. luminous flux 1,500, 3,000 and 4,000 lm
- Efficacy of the module up to 181 lm/W
- High colour rendering index CRI > 80
- Small colour tolerance MacAdam 3[®]
- Small luminous flux tolerances

Mechanical properties

- Module dimension $\varnothing 160$ mm, $\varnothing 190$ mm, $\varnothing 220$ mm and $\varnothing 315$ mm
- Simple installation (e.g. screws)

System solution

- LED system solution consisting of the LED module, the control gear with integrated emergency function and SWITCH sensor

Technical data

Beam characteristic	120°
Ambient temperature range	-25 ... +45 °C
tp rated	65 °C
tc	85 °C
Irated for CLE 160mm	350 mA
Irated for CLE 190/220mm	350 mA
Irated for CLE 315mm	600 mA
I _{max} for CLE 160mm	850 mA
I _{max} for CLE 190/220mm	700 mA
I _{max} for CLE 315mm	1,200 mA
Max. permissible LF current ripple for CLE 160mm	1,000 mA
Max. permissible LF current ripple for CLE 190/220mm	800 mA
Max. permissible LF current ripple for CLE 315mm	1,400 mA
Max. permissible peak current for CLE 160mm	1,200 mA / max. 10 ms
Max. permissible peak current for CLE 190/220mm	960 mA / max. 10 ms
Max. permissible peak current for CLE 315mm	1,680 mA / max. 10 ms
Max. working voltage for insulation ^①	60 V SELV
Insulation test voltage	0.5 kV
ESD classification	severity level 1
Risk group (EN 62471:2008)	RG0
Type of protection	IP00

1.2 Energy classification

Type	Energy classification
CLE G3 ADV	A++

2. Thermal details

2.1 tp point, ambient temperature and life-time

The temperature at tp reference point is crucial for the light output and life-time of a LED product.

For CLE a tp temperature of 65°C has to be complied in order to achieve an optimum between light output and life-time.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

2.2 Storage and humidity

Storage temperature	-30 ... +80 °C
---------------------	----------------

Operation only in non condensing environment.

Humidity during processing of the module should be between 30 to 70 %.

2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the CLE will be greatly reduced or the CLE may be destroyed.

2.4 Heat sink values

CLE G3 160mm 3000lm

ta	tp	Forward current	Rth, hs-a	Cooling area
25 °C	65 °C	350 mA		self-cooling
35 °C	65 °C	350 mA		self-cooling
45 °C	65 °C	350 mA	2.92 K/W	229 cm²
25 °C	65 °C	500 mA	3.79 K/W	176 cm²
35 °C	65 °C	500 mA	2.84 K/W	234 cm²
45 °C	65 °C	500 mA	1.90 K/W	352 cm²

CLE G3 190/220mm 1500lm

ta	tp	Forward current	Rth, hs-a	Cooling area
25 °C	65 °C	350 mA		self-cooling
35 °C	65 °C	350 mA		self-cooling
45 °C	65 °C	350 mA		self-cooling
25 °C	65 °C	500 mA		self-cooling
35 °C	65 °C	500 mA		self-cooling
45 °C	65 °C	500 mA		self-cooling

CLE G3 315mm 4000lm

ta	tp	Forward current	Rth, hs-a	Cooling area
25 °C	65 °C	600 mA		self-cooling
35 °C	65 °C	600 mA		self-cooling
45 °C	65 °C	600 mA		self-cooling
25 °C	65 °C	900 mA		self-cooling
35 °C	65 °C	900 mA		self-cooling
45 °C	65 °C	900 mA		self-cooling

Notes

The actual cooling can differ because of the material, the structural shape, outside influences and the installation situation. A thermal connection between CLE G3 and heat sink with heat-conducting paste or heat conducting adhesive film is absolutely necessary.

Additionally the CLE G3 has to be fixed on the heat sink with M3 screws to optimise the thermal connection.

Use of thermal interface material with thermal conductivity of $\lambda > 1 \text{ W/mK}$ and layer thickness of interface material with max. 50 μm or a similar interface material where the quotient of layer thickness and thermal conductivity $b < 50 \mu\text{mmK/W}$.

3. Installation / wiring

3.1 Electrical supply/choice of LED Driver

CLE from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED Driver which complies with the relevant standards.

If a LED Driver other than from Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

CLE must be supplied by a constant current LED Driver. Operation with a constant voltage LED Driver will lead to an irreversible damage of the module.

Wrong polarity can damage the CLE.

With parallel wiring tolerance-related differences in output are possible (thermal stress of the module) and can cause differences in brightness. If one module fails, the remaining modules may be overloaded.

CLE have to be operated with a SELV LED Drive.

CLE are basic insulated up to 60 V SELV against ground and can be mounted directly on earthed metal parts of the luminaire. If the max. output voltage of the LED Driver (also against earth) is above 60 V SELV, an additional insulation between LED module and heat sink is required (for example by insulated thermal pads) or by a suitable luminaire construction.

At voltages > 60 V an additional protection against direct touch (test finger) to the light emitting side of the module has to be guaranteed. This is typically achieved by means of a non removable light distributor over the module.

3.2 Wiring

CLE G3 160mm

CLE G3 190/220/315mm

Wiring example

3.3 Wiring type and cross section

The wiring can be solid cable with a cross section of 0.2 to 0.75 mm². For the push-wire connection you have to strip the insulation (7-9 mm). Loosen wire through twisting and pulling.

Press down the "push button" and remove the cable from front.

3.4 Mounting instruction

None of the components of the CLE (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Max. torque for fixing: 0.5 Nm.

The LED modules are mounted with 4 screws per module. In order not to damage the modules only rounded head screws and an additional plastic flat washer should be used.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate. Avoid corrosive atmosphere during usage and storage.

3.5 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

4. Life-time

4.1 Life-time, lumen maintenance and failure rate

The light output of an LED Module decreases over the life-time, this is characterized with the L value.

L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the life-time of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules.

The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value. In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

4.2 Lumen maintenance

5. Electrical values

5.1 Typ. forward voltage vs. forward current

CLE G3 160mm

CLE G3 190/220mm

CLE G3 315mm

5.2 Forward voltage vs. t_p temperature

The diagrams based on statistic values. The real values can be different.

6. Photometric characteristics

6.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured integral by a current impulse with Irated of the module and a duration of 100 ms.

The ambient temperature of the measurement is $t_a = 25^\circ\text{C}$.

The measurement tolerance of the colour coordinates are ± 0.01 .

3,000 K

	x0	y0
Centre	0.4338	0.4030

4,000 K

	x0	y0
Centre	0.3818	0.3797

— MacAdam Ellipse: 3SDCM

6.2 Light distribution

The optical design of the CLE product line ensures optimum homogeneity for the light distribution.

The colour temperature is measured over the complete module. The single LED light points can be outside of 3SDCM. To ensure an ideal mixture of colours and a homogeneous light distribution a suitable optic (e. g. PMMA diffuser) and a sufficient spacing between module and optic (typ. 5 cm) should be used.

6.3 Relative luminous flux vs. tc temperature

6.4 Relative luminous flux vs. operating current
