

## Module ELA SNC2

Modules ELA essence

### Product description

- Edgelit panel for direct recessed mount and surface or suspended mount with accessories
- With pre-installed connection cable and integrated plug
- For suspended ceiling grid measure of 600 mm
- IK rating IK02
- Product colour (frame) RAL 9003
- Diffusor material: PS
- Lightguide material: PS
- Long lifetime: 30,000 hours
- 3 years guarantee (conditions at [www.tridonic.com](http://www.tridonic.com))

### Optical properties

- Colour temperatures 3,000, 4,000 and 6,500 K
- Useful luminous flux 3,660 lm at Irated and tp = 25 °C
- Efficacy of the LED module 114 lm/W at Irated and tp = 25 °C
- High colour rendering index CRI > 80
- Small colour tolerance MacAdam 6<sup>®</sup>
- Small luminous flux tolerances
- UGR < 22

### Mechanical properties

- Module dimension 595 x 595 mm

### System solution

- Combine Tridonic's LED modules and dimmable drivers to achieve an outstanding system efficacy (configuration possible via <https://setbuilder.tridonic.com/>)

**Standards**, page 6

**Colour temperatures and tolerances**, page 9

### Module ELA SNC2

Modules ELA essence

#### Technical data

Beam characteristic	110°
Ambient temperature range	-20 ... +40 °C
tp rated	45 °C
tc	70 °C
Irated	800 mA
Imax	990 mA
Max. permissible LF current ripple	1,170 mA
Max. permissible peak current	1,500 mA / max. 10 ms
Max. working voltage for insulation SELV	< 60 V
Insulation test voltage	0.5 kV
ESD classification	severity level 2
Risk group (IEC 62471) <sup>®</sup>	RG0
Classification acc. to IEC 62031	Independent
Type of protection	IP20
Lumen maintenance L70B50	30,000 h
Guarantee	3 years

#### Ordering data

## 1. Standards

EN 62031  
EN 62471  
EN 61000-4-2  
EN 62717  
EN 60598-1

### 1.1 Photometric code

Key for photometric code, e. g. 830 / 359

1 <sup>st</sup> digit	2 <sup>nd</sup> + 3 <sup>rd</sup> digit	4 <sup>th</sup> digit	5 <sup>th</sup> digit	6 <sup>th</sup> digit
Code CRI	Colour temperature in Kelvin x 100	MacAdam initial	MacAdam after 25% of the lifetime (max.6000h)	Luminous flux after 25% of the lifetime (max.6000h)
7 70 – 79				Code Luminous flux
8 80 – 89				7 ≥ 70 %
9 ≥90				8 ≥ 80 %
				9 ≥ 90 %

### 1.2 Energy classification

Type	Colour temperature	Forward current	Energy classification	Energy consumption
ELA 600x600mm 3800lm 830 SNC2	3,000 K	800 mA	F	32 kWh / 1,000 h
ELA 600x600mm 3800lm 840 SNC2	4,000 K	800 mA	F	32 kWh / 1,000 h
ELA 600x600mm 3800lm 865 SNC2	6,500 K	800 mA	F	32 kWh / 1,000 h

Energy label and further information at [www.tridonic.com](http://www.tridonic.com) in the certificates tab of the corresponding product page and at the EPREL data base <https://eprel.ec.europa.eu/>

## 2. Thermal details

### 2.1 tc point, ambient temperature and lifetime

The temperature at tp reference point is crucial for the light output and lifetime of a LED product.

For ELA a tp temperature of 45 °C has to be complied in order to achieve an optimum between light output and lifetime.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

### 2.2 Storage and humidity

Storage temperature	-20 ... +50 °C
---------------------	----------------

Operation only in non condensing environment.

Humidity during operation of the module should be between 0 to 70 %.

### 2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the operating temperature.

If the permissible temperature limits are exceeded, the life of the ELA will be greatly reduced or the ELA may be destroyed.

## 3. Installation / wiring

### 3.1 Electrical supply/choice of LED driver

ELA modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED driver which complies with the relevant standards. The use of LED driver from Tridonic in combination with ELA modules guarantees the necessary protection for safe and reliable operation.

If a LED driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

ELA modules must be supplied by a constant current LED driver. Operation with a constant voltage LED driver will lead to an irreversible damage of the module.

Wrong polarity can damage the ELA.

ELA modules must be operated with SELV LED drivers. ELA modules are not designed for parallel or serial wiring. A separate driver or output channel (for multi-channel LED drivers) must be used for each ELA module.

### 3.2 Wiring

### 3.3 Wiring type and cross section

ELA has a pre-installed, flexible connection cable for easy connection of the driver during installation

Wire cross section: AWG22

Stripping length: 9 mm, pre-tinned

### 3.4 Mounting instruction

None of the components of the ELA (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Recessed mounting for suspended ceilings with grid measure of 600 mm.

For surface mounted applications use the ACE Surface mount kit and for suspended mounting the ACE Suspension kit.

For more details see mounting instructions.

To prevent fingerprints we recommend to mount the ELA only with gloves.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

### 3.5 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline\_EOS\_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

## 4. Lifetime

### 4.1 Lifetime, lumen maintenance and failure rate

The light output of an LED module decreases over the lifetime, this is characterized with the L value.

L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the lifetime of an LED module.

The L value is a statistical value and the lumen maintenance may vary over the delivered LED modules.

The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value. In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

### 4.2 Lumen maintenance for ELA

Forward current	tp temperature	L90 / B10	L90 / B50	L80 / B10	L80 / B50	L70 / B10	L70 / B50
600 / 800 / 900 mA	45 °C	17k h	19k h	22k h	24k h	27k h	30k h
	55 °C	17k h	19k h	22k h	24k h	27k h	30k h
	65 °C	16k h	17k h	20k h	22k h	25k h	28k h
	70 °C	15k h	17k h	19k h	21k h	23k h	26k h

Lumen maintenance values are based on LM80 data. Table may be updated when more recent results are available.

### 4.3 Switching capability

25,000 cycles

Test according to IEC 62717 CI 10.3.3  
30 s on / 30 s off at Imax

## 5. Electrical values

### 5.1 Declaration of electrical parameters

$I_{rated}$  ... Nominal operating current the module is designed for.

$I_{max}$  ... Max. permissible continuous operating current incl. the tolerances of the LED driver.

Max. permissible LF current ripple ... Max. output current of the LED driver incl. Tolerances and LF current ripple must not exceed this value.

Max. permissible peak current ... The max. output peak current of the LED driver must not exceed this value.

### 5.2 Typ. forward voltage vs. forward current

### 5.3 Forward voltage vs. $T_c$ temperature

The diagrams are based on statistic values.

The real values can be different.

## 6. Photometric characteristics

### 6.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured integral by a current impulse at the rated current. Integration time is 100 ms.

The ambient temperature of the measurement is  $t_a = 25^\circ\text{C}$ .

The measurement tolerance of the colour coordinates are  $\pm 0.005$ .

## 6.2 Light distribution

The optical design of the ELA product line ensures optimum homogeneity for the light distribution.

The colour temperature is measured integral over the complete module. The single LED light points can have deviations in the colour coordinates.

The random appearance of minor shining dots is state of the art and technologically inevitable. This does not qualify for returns or warranty claims.

### 6.3 Relative luminous flux vs. $t_p$ temperature

### 6.4 Relative luminous flux vs. operating current
